

# Hi-Velocity Systems

Mini Duct Heating and Air Conditioning  
Indoor Air Quality Systems

Colfix, needed to retrofit air conditioning to eight offices on the 1st floor. The Hi-Velocity System was recommended as the ideal solution.

The Hi-Velocity System offers draft free air flow, even temperatures from floor to ceiling, air filtration and fresh air. As the system is fast and easy to fit, it was fitted during normal working hours with no disruption to the office operations

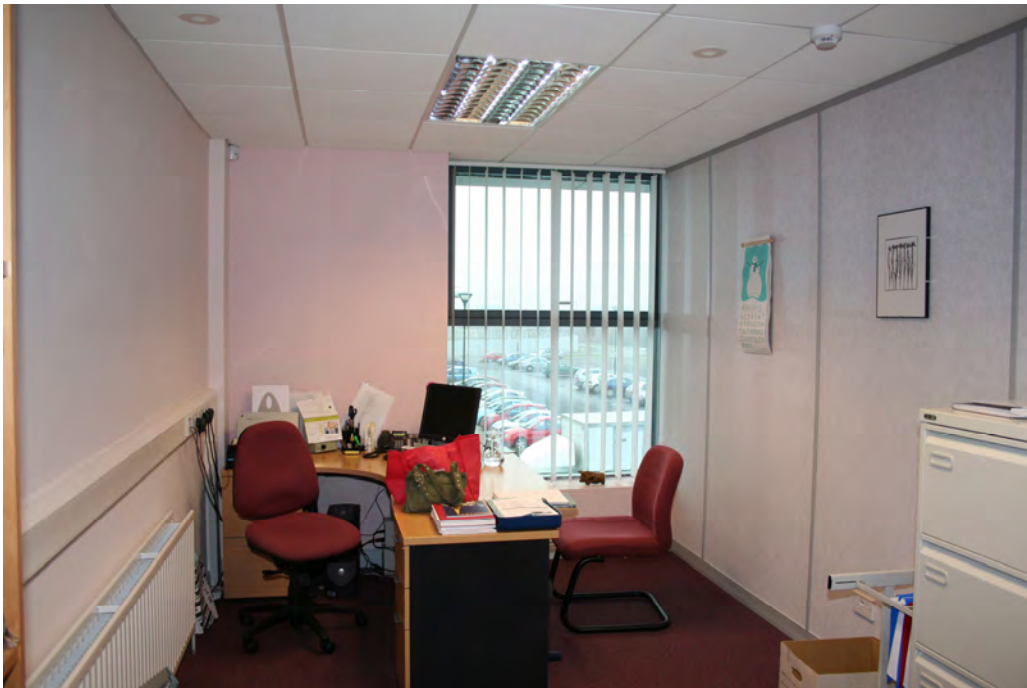

With each of the eight offices having individual time and temperature control, each person can adjust their temperature to their own comfort level. With employee comfort being most important at Colfix, the staff are delighted with how comfortable the offices are.

A modulating inverter driven single phase heat pump supplies the air conditioning, Aprilaire thermostats and a zone control system are used throughout.

The outlets blend in with the ceiling. No structural or ceiling changes were needed for the installation.
