

Quick Overview

The new image of Energy Saving Products Ltd: You will notice the brochures and literature now produced from ESP have changed in design to reflect the Hi-Velocity Systems Trademark. We feel this better represents our Company's products as to who we are and what we manufacture. Look forward to many new changes from ESP in the near future.

2006 ASHRAE Trade Show

The ASHRAE show is once again upon us for the year 2006 in Chicago, IL. Look for us at booth #1516, where we will be promoting two HV units this year, the HV-52 and the HV-70. These two units will be on display along with an R Series Cooling Module, our Hi-Velocity accessories and the ESP nitro funny car. This will be a good chance to update yourself on the Hi-Velocity Systems and ask an ESP representative any questions. The ESP representatives will be looking forward to questions and input from all who stop by the booth. Driver Randy Bykowsky from ESP Racing Ltd. will be in attendance with the nitro funny car to answer any questions you may have and will also be available for photo opportunities.

New Manuals

With the new image Energy Saving Products has developed, it has redesigned the Hi-Velocity manuals. The Hi-Velocity Installation Manual is now more comprehensive to the installer, providing easy to find information with more details, for a better understanding of how to install the system. With the goal to improve our products and literature, we didn't stop at just the installation manual. The Hi-Velocity Design Manual and R Series Cooling Module manuals have also been updated and redesigned to ease the understanding to the installer and designer of Hi-Velocity Systems. The new manuals are available online at the ESP website, www.hi-velocity.com, or contact an ESP representative on our toll free number: 1-888-652-2219 to receive a printed copy. We hope these changes help all involved with the installation and distribution of the Hi-Velocity Systems.

ESP Invades Europe

Left to Right: H.E. Mark Moher Canadian Ambassador to Ireland, Mr Dick Roche T.D. (MP) Minister for the Environment (Ireland), John Harris of E.J. Fidgeon Air Conditioning & Heating Equipment. Picture taken at the Canada Section of the Building Exhibition in Ireland, which was held at the R.D.S. Exhibition center in Dublin.

The Hi-Velocity Systems are now being distributed throughout Europe. We welcome aboard E.J. Fidgeon to the Hi-Velocity Systems team.

EJ Fidgeon handles all European sales. Based in Ireland, EJ Fidgeon was the first company to introduce mini duct systems to Europe in 2001. Since then mini duct systems have gained in popularity. Leading architects and engineers are specifying the Hi-Velocity System for commercial and residential projects. Hi-Velocity Systems are the ultimate in home and office comfort.

With over 15 years of experience in heating and air conditioning equipment, EJ Fidgeon provides the best in design and product support. The design service provided includes customized load calculations, material list and component layout unique to your project. EJ Fidgeon conducts training classes and seminars for architects, engineers, plumbers, air conditioning contractors and self builders at regular intervals. Contact us at ejfidgeon@ejfidgeon.com or check the Hi-Velocity web site for the next training venues.

Vegas Agents Meeting

The Vegas agent meeting was a step in the right direction. Many ideas were brought up and new ideas introduced. With new agents joining the Hi-Velocity team all the time, an Agents Board consisting of 4 well established Hi-Velocity representatives has been formed. The goal of the agents board will be quality control, promotional ideas and the selection of high profile trade shows. The board consists of the following agents:

Hogan, Gerry	Edward R. Stephens
Malloy, Don	Kissel-Malloy
Schack, Peter	Tempmizer
Schaeffer, Mike	Plastic Systems Inc.

The idea of introducing a 3" flexible duct was brought up from the Research and Development team of Hi-Velocity Systems. With the positive response from the Agents, it is currently being developed at the ESP Laboratories. Preliminary results are expected to be ready in the first month of the New Year 2006. Leon Prevost, our C.E.O who is now in charge of the R&D department, has the project moving forward and is getting positive results with the new 3" Rough-In Boots. You may be asking *WHY* go to a 3" flexible run on the Hi-Velocity Systems when the 2" flexible duct works so well. Energy Saving Products is always trying to improve upon itself and improve things for their agents, installers, wholesalers and homeowners. With 3" flexible runs, less flexible duct would need to be purchased for a typical installation. Resulting in lower costs and quicker installations, these factors alone are more than enough reason to apply this technology to the Hi-Velocity Systems.

Energy Saving Products Ltd. to Incorporate E.C.M. Motors in their Hi-Velocity Systems.

Energy Saving Products Ltd. will introduce Electronic Commutating Motors (ECM) into their Hi-Velocity Systems™ air handlers in the spring of 2006. ESP continuously improves upon their product lines with the end user in mind. With the new ECM motors, not only will it save the customer money, but with the programmability of the built in microprocessor it will allow for a greater comfort level.

The new motors will have lower power draws which will be more energy efficient, reducing the operating costs of the Hi-Velocity System. At full load capacities, ECM motors are 20% more efficient than standard induction motors. When the Hi-Velocity Systems air handlers are run at lower speeds, the ECM motors can use up to 50% less energy than induction motors. With energy bills on the rise every year we feel this is a positive step for all involved with Hi-Velocity Systems.

ESP Racing

ESP Racing's 2005 nitro funny car season ended with a bang. Randy Bykowsky, driver of the ESP funny car, pulled in a time of 5.74 seconds at a speed of 246 mph. In both time and speed, this was the quickest pass by any funny car in 2005 at Bud Park. Look for the nitro funny car at the ASHRAE show in Chicago, booth #1516 and get a picture taken with the Driver.

New Installation Video

Energy Saving Products Ltd. has gone into the filming industry and released it's own Installation Video. Creating our own Installation Video was the best way to explain the Hi-Velocity System to installers and other interested parties. The video addresses some of the smallest details of the Hi-Velocity system, allowing installers to see beforehand the proper method of each step. To view the new installation video visit our web site at www.hi-velocity.com, or call our toll free number 1-888-652-2219 for the CD release. The CD release is a high quality video created for training classes and presentations.
