# *The Hi-Velocity Systems™ Advantage*

As concerns over climate change and other environmental issues continues to grow, interest in efficient, **environmentally friendly** technologies is increasing amongst homeowners and builders alike. The **Hi-Velocity System** offers consumers products designed to **improve indoor air quality (IAQ)** while simultaneously **decreasing energy usage** and **reducing their environmental footprint**.

- Delivers air under a greater pressure than a conventional system, to better mix the air and **eliminate hot and cold spots**
- Air Handler Units are modular, and can be installed in a **variety of orientations**
- Our duct work **fits where standard duct work would not**
- Installs in **25% less time than a conventional system**, without the need for major remodelling!
- High Efficiency Energy Smart Motors with Variable Frequency Drive will **save money on your heating bills**
- Insulated flex duct prevents heat loss/gain and has a sound absorbing inner core to **deliver the air whisper quiet**

*Comfort from floor to ceiling,  
satisfaction from room to room.*

# Selection

Our vent plate selection can be matched with any décor, inconspicuously delivering fresh conditioned air evenly throughout your home. The small size of our vent plates allows them to easily blend in with their surroundings, which doesn't attract attention, allowing you to create the atmosphere you want in your living environment.

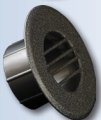

Stainless Steel

Silver Vein

Copper Vein

Black Wrinkle

Unfinished Oak

Unfinished Maple

White Plastic

2" Vent Plates are slightly different:

Louvered insert for plastic vent plate, available upon request

Vent plates can be stained or painted to match wood flooring or wall/ceiling/floor colors.

# *Design*

Our Vent Plates can be located in:

Floors

Walls

Ceilings

Anywhere!

# Versatility

You don't have to design your home around our systems. Whether used for heating, cooling, or both, our units can be located almost **anywhere in your home**.

Our flexible two-inch and HE ducts are **more adaptable than traditional ducts** and do not place the same strict limitations on architects. Our duct can be installed along joists, in between walls, or other confined areas **quickly and easily**.

**Heating:** A network of smaller, flexible ducts operate under high pressure to continuously circulate air and ensure even heat distribution. **Boilers, Dual Purpose Hot Water Heaters, Heat Pumps, and Geothermal Systems can all be used as heat sources with our coils.** Also available is our Slide-In Electric Module, which is easily installed without any external mounting or duct work required.

**Cooling:** The high pressure distribution network also cools each level of a structure evenly. **Chillers, Condensing Units, Geothermal Systems, and Heat Pumps can all be used as cooling sources with our coils.** Use of a lower CFM across our cooling coils ensures a larger amount of humidity is removed from the air, for increased comfort.

Also Available:

*The* **Hi-Velocity**  
*Air Purification System*

**Three Powerful Technologies in one Air Purification System.** Easily installed on any Hi-Velocity or existing HVAC System, giving consumers unsurpassed indoor air quality.
